

# COURSERA CAPSTONE PROJECT - THE BATTLE OF NEIGHBORHOODS

## INTRODUCTION

New York City's demographics show that it is a large and ethnically diverse metropolis. It is the largest city in the United States with a long history of international immigration. New York City was home to nearly 8.5 million people in 2014, accounting for over 40% of the population of New York State and a slightly lower percentage of the New York metropolitan area, home to approximately 23.6 million. Over the last decade the city has been growing faster than the region. The New York region continues to be by far the leading metropolitan gateway for legal immigrants admitted into the United States.

Throughout its history, New York City has been a major point of entry for immigrants; the term "melting pot" was coined to describe densely populated immigrant neighbourhoods on the Lower East Side. As many as 800 languages are spoken in New York, making it the most linguistically diverse city in the world. English remains the most widely spoken language, although there are areas in the outer boroughs in which up to 25% of people speak English as an alternate language, and/or have limited or no English language fluency. English is least spoken in neighbourhoods such as Flushing, Sunset Park, and Corona.

With its diverse culture, comes diverse food items. There are many restaurants in New York City, each belonging to different categories like Chinese, Indian, French etc.

So, as part of this project, we will list and visualize all major parts of New York City that has great Chinese restaurants.

We will look at visual data to analyze which Borough is the most popular for Chinese restaurants and further which neighborhood has the highest number of said restaurants.

## DATA

For this project we need the following data:

**New York City data that contains list Boroughs, Neighborhoods along with their latitude and longitude.**

- *Data source: [https://cocl.us/new\\_york\\_dataset](https://cocl.us/new_york_dataset)*
- *Description: This data set contains the required information. And we will use this data set to explore various neighborhoods of New York city.*

**Chinese restaurants in each neighborhood of New York city.**

- *Data source: Fousquare API*
- *Description: By using this api we will get all the venues in each neighborhood. We can filter these venues to get only Chinese restaurants.*

**GeoSpace data**

- *Data source: <https://data.cityofnewyork.us/City-Government/Borough-Boundaries/tqmj-j8zm>*
- *Description: By using this geo space data we will get the New York Borough boundaries that will help us visualize choropleth map.*
